

More than 50 years ago, one of our engineers started to work on easing constant back pain with so many people suffering from it. By the 1970's his system had been used by many of our customers. Today, you will find it in the majority of bedrooms throughout Central Europe. In 1998 we expanded and start selling complete sleep systems manufactured under the strictest standards of quality to Australia. In 2005 we moved into Canada and USA.

The idea is simple: The spine and body are flexible. Give them flexible support - a truly orthopedic one that adjusts automatically to each individual body and how it moves. No more tossing and turning to find a comfortable position since the bed adapts to the body at any position. The slats also allow for air to get through easier than a regular system allows therefore giving us a much better sleep.

Our system offers adjustable beds, flexible slat bases, mattresses, bed frames, bedding and bedroom accessories. Our experience allows us to provide individually tailored sleep solutions to fit any customer.

Main goal of our company is to provide high quality and modern designs using only the best materials and newest technologies combined with the best possible service.

Before a new bed frame is introduced and included in our collection, each new component (slat, cup, etc.) is mechanically tested – we use very good testing equipment which simulates the use of a real bed frame for a long period with repetitive motion. Not until the

components pass our testing they can become part of our products.

## **Our Sleep System from Alaska to Los Angeles**

Complete our system with a latex or memory mattress and you have the perfect solution to your sleeping needs.

Our knowledgeable associates will assess your special needs and suggest an adjustable slat bed with an adequate *mattress* (orthopaedic mattresses) to suit your specific needs. Body weight, height, and special health conditions you or your partner may have, such as back pain, allergies, sleep apnea, restless leg syndrome, acid reflux, and asthma, to name a few, will be taken into consideration when helping you choose the right sleep system adjustable bed.

Great airflow to keep mattress well ventilated, more  
hygienic and healthier,  
NO Insects, Spiders or Dust-mites can breed.

- Minimal partner disturbance.
- \* Minimises Pressure areas such as hips and shoulders.
- \* Independent tension adjustable slats each side.

Our adjustable slat beds can come as solid (non-adjustable), or with head and foot adjustable as well as motorized depending on comforts you require.

The basic model (non-adjustable) will have 28 slats which allow for solid support and a great airflow to keep your mattress and your body well cooled off.

The more favourite model is the one with a motor so you can adjust it as your needs change during the sleep without much effort.

Why is a slatted frame so important for good and healthy sleep? A good mattress is just one half of the healthy sleeping concept. It must be supported by a corresponding slatted frame, which allows uncovering the advantages of a mattress (especially elasticity) and supports its proper use. As sweat is absorbed by the mattress cover and core, air circulation is also very important to keep the mattress in perfect condition and dry – this is achieved by use of slatted frames. Adjustable slatted frames are very good not only for reading in the bed or watching TV but they can help to improve one's health condition as well – e.g. slight positioning of legs supports better blood circulation. Furthermore invaluable are the adjustable slatted frames with motor, suitable both for wide public and also for people confined to bed.

We hope this information has been useful for you. We wish you make a good choice with our products and experience a good healthy sleeping from now on.
